

## Next meeting

[www-cdf.lbl.gov/~currat/talks/](http://www-cdf.lbl.gov/~currat/talks/)

**Charles Currat**  
LBNL

**October 28, 2003**

- ❖ Bug report: PSUP geometry
- ❖ Atmospheric neutrinos

- ❖ Divide by zero exception in `geda_psup_ov1.for` (PMT support structure) encountered by C. Kyba (U. Penn) when dealing with down-going  $\mu$
- ❖ More academic than a real issue. All about distance determination from a point to the AV/chimney support structure. Case handling will do it... modulo the code modification policy behind it

## Atmospheric muons

- ◆ Plot from N. Tagg's thesis (2001). Used 149 days of data  
➡ around 4 times as much data now.
- ◆ Factor  $\sim 6$  reduction in the event selection between "after instrumental bg removal" and "after reco and GOF cuts"
- ◆ Random thought: phase III ➡ to what extent could we use the NCDs to help determine (fit) the muon track...?
